Don't debate, LEGISLATE!,

In reference to #94P-0036. In europe
hydrogenation of fats is limited to 5%. As people are
made aware of its lethal effects, tables telling what
% trans-fatty acids (1-4%) would still be very helpful.

If industry co-operates, heart disease could finally
lose its #1 killer status! 4; NO MORE!

TRUELY,

Mark H. Wagner

Missoula, MT 59804

P.S. Just labels; 0% to "fully hydrogenated" (100%)
might help some folks, but many others
never read labels; they need your help!
